DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of claims 11-13 in the reply filed on 4/30/2007 is acknowledged. The traversal is on the ground(s) that the elected species search would require the search for the other species as well. This is not found persuasive because the species are distinct and different and therefore would require distinct and different searches. Searching all of the claimed species would put a serious burden on the examiner.

The requirement is still deemed proper and is therefore made FINAL. Claims 1-6 and 14-19 are withdrawn from consideration.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless – (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 7, 8 and 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Ikutsu (JP 2001324263).

Ikutsu discloses a high pressure processing apparatus having a chamber, fluid supplier and fluid discharger (see Fig. 1, Items 101, 108, 110; abstract). Ikutsu also discloses applying supercritical fluid (abstract) and rotating the substrate (Fig. 3). Ikutsu further discloses the fluid dispersing mechanism supplying fluid to the surface of the substrate (Fig. 1, 3), and the fluid dispersing unit is a plate with holes (Fig. 2, 6).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ikutsu in view of Amada et al. (JP63073626).

Ikutsu discloses the substrate processing above. Ikutsu does not specifically disclose the fluid discharger in the wall approximately parallel with the surface of the substrate. Amada discloses this feature (Fig. 1). At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify Ikutsu with side expelling shown by Amada for the benefit of removing more foreign matters efficiently.

Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ikutsu in view of Kim (US 2004/0020520).

Ikutsu discloses the apparatus shown above. Ikutsu does not specifically disclose holes, which the distance between the circumferentially adjacent holes is smaller toward the center of the plate than at the peripheries. Kim discloses the feature of the holes placed further apart at the edge of the plate, which would provide flow rates which were approximately the same (Fig. 3). At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify Ikutsu with Kim as an alternative design of spreading fluid across the surface of the wafer.
